### **Chapter 3 Seismic Data Processing:**

**Seismic Data Interpretation using Digital Image Processing** Abdullatif A. Al-Shuhail, Saleh A. Al-Dossary, Wail A. Mousa, 2017-06-05 Bridging the gap between modern image processing practices by the scientific community at large and the world of geology and reflection seismology This book covers the basics of seismic exploration with a focus on image processing techniques as applied to seismic data Discussions of theories concepts and algorithms are followed by synthetic and real data examples to provide the reader with a practical understanding of the image processing technique and to enable the reader to apply these techniques to seismic data The book will also help readers interested in devising new algorithms software and hardware for interpreting seismic data Key Features Provides an easy to understand overview of popular seismic processing and interpretation techniques from the point of view of a digital signal processor Presents image processing concepts that may be readily applied directly to seismic data Includes ready to run MATLAB algorithms for most of the techniques presented The book includes essential research and teaching material for digital signal and image processing individuals interested in learning seismic data interpretation from the point of view of digital signal processing It is an ideal resource for students professors and working professionals who are interested in learning about the application of digital signal processing theory and algorithms to seismic data

**Acquisition and Processing of Marine Seismic Data** Derman Dondurur, 2018-03-09 Acquisition and Processing of Marine Seismic Data demonstrates the main principles required equipment and suitable selection of parameters in 2D 3D marine seismic data acquisition as well as theoretical principles of 2D marine seismic data processing and their practical implications Featuring detailed datasets and examples the book helps to relate theoretical background to real seismic data This reference also contains important QC analysis methods and results both for data acquisition and marine seismic data processing Acquisition and Processing of Marine Seismic Data is a valuable tool for researchers and students in geophysics marine seismics and seismic data as well as for oil and gas exploration Contains simple step by step diagrams of the methodology used in the processing of seismic data to demonstrate the theory behind the applications Combines theory and practice including extensive noise QC and velocity analyses as well as examples for beginners in the seismic operations market Includes simple illustrations to provide to the audience an easy understanding of the theoretical background Contains enhanced field data examples and applications

[Algorithms and Architectures for Parallel Processing, Part I](#) Yang Xiang, Alfredo Cuzzocrea, Michael Hobbs, Wanlei Zhou, 2011-10-23 This two volume set LNCS 7016 and LNCS 7017 constitutes the refereed proceedings of the 11th International Conference on Algorithms and Architectures for Parallel Processing ICA3PP 2011 held in Melbourne Australia in October 2011 The first volume presents 24 revised regular papers and 17 revised short papers together with the abstract of the keynote lecture all carefully reviewed and selected from 85 initial submissions The papers cover the many dimensions of parallel algorithms and architectures encompassing fundamental theoretical approaches practical experimental results and commercial components and systems

and focus on two broad areas of parallel and distributed computing i.e architectures algorithms and networks and systems and applications

**Seismic Reservoir Modeling** Dario Grana,Tapan Mukerji,Philippe Doyen,2021-04-19 Seismic reservoir characterization aims to build 3 dimensional models of rock and fluid properties including elastic and petrophysical variables to describe and monitor the state of the subsurface for hydrocarbon exploration and production and for CO2 sequestration Rock physics modeling and seismic wave propagation theory provide a set of physical equations to predict the seismic response of subsurface rocks based on their elastic and petrophysical properties However the rock and fluid properties are generally unknown and surface geophysical measurements are often the only available data to constrain reservoir models far away from well control Therefore reservoir properties are generally estimated from geophysical data as a solution of an inverse problem by combining rock physics and seismic models with inverse theory and geostatistical methods in the context of the geological modeling of the subsurface A probabilistic approach to the inverse problem provides the probability distribution of rock and fluid properties given the measured geophysical data and allows quantifying the uncertainty of the predicted results The reservoir characterization problem includes both discrete properties such as facies or rock types and continuous properties such as porosity mineral volumes fluid saturations seismic velocities and density **Seismic Reservoir Modeling Theory Examples and Algorithms** presents the main concepts and methods of seismic reservoir characterization The book presents an overview of rock physics models that link the petrophysical properties to the elastic properties in porous rocks and a review of the most common geostatistical methods to interpolate and simulate multiple realizations of subsurface properties conditioned on a limited number of direct and indirect measurements based on spatial correlation models The core of the book focuses on Bayesian inverse methods for the prediction of elastic petrophysical properties from seismic data using analytical and numerical statistical methods The authors present basic and advanced methodologies of the current state of the art in seismic reservoir characterization and illustrate them through expository examples as well as real data applications to hydrocarbon reservoirs and CO2 sequestration studies

**Carbonate Seismology** Ibrahim Palaz,K. J. Marfurt,1997 In this volume the geologic framework is established with review papers by experts in carbonate generation rock properties sequence and seismic stratigraphy and structural deformation Then seismic expression of carbonate terranes is explored in case studies showing the importance of integrating seismic and petrophysical control with geologic models

**Signal Processing for Remote Sensing** C.H. Chen,2008 Continuing in the footsteps of the pioneering first edition **Signal and Image Processing for Remote Sensing** Second Edition explores the most up to date signal and image processing methods for dealing with remote sensing problems Although most data from satellites are in image form signal processing can contribute significantly

in extracting information from remotely sensed waveforms or time series data This book combines both providing a unique balance between the role of signal processing and image processing Featuring contributions from worldwide experts this book continues to emphasize mathematical approaches Not limited to satellite data it also considers signals and images from hydroacoustic seismic microwave and other sensors Chapters cover important topics in signal and image processing and discuss techniques for dealing with remote sensing problems Each chapter offers an introduction to the topic before delving into research results making the book accessible to a broad audience This second edition reflects the considerable advances that have occurred in the field with 23 of 27 chapters being new or entirely rewritten Coverage includes new mathematical developments such as compressive sensing empirical mode decomposition and sparse representation as well as new component analysis methods such as non negative matrix and tensor factorization The book also presents new experimental results on SAR and hyperspectral image processing The emphasis is on mathematical techniques that will far outlast the rapidly changing sensor software and hardware technologies Written for industrial and academic researchers and graduate students alike this book helps readers connect the dots in image and signal processing New in This Edition The second edition includes four chapters from the first edition plus 23 new or entirely rewritten chapters and 190 new figures New topics covered include Compressive sensing The mixed pixel problem with hyperspectral images Hyperspectral image HSI target detection and classification based on sparse representation An ISAR technique for refocusing moving targets in SAR images Empirical mode decomposition for signal processing Feature extraction for classification of remote sensing signals and images Active learning methods in classification of remote sensing images Signal subspace identification of hyperspectral data Wavelet based multi hyperspectral image restoration and fusion The second edition is not intended to replace the first edition entirely and readers are encouraged to read both editions of the book for a more complete picture of signal and image processing in remote sensing See *Signal and Image Processing for Remote Sensing* CRC Press 2006
