Dynamic Systems Biology Modeling Simulation:

Dynamic Systems Biology Modeling and Simulation Joseph DiStefano III, 2015-01-10 Dynamic Systems Biology Modeling and Simulation consolidates and unifies classical and contemporary multiscale methodologies for mathematical modeling and computer simulation of dynamic biological systems from molecular cellular organ system on up to population levels The book pedagogy is developed as a well annotated systematic tutorial with clearly spelled out and unified nomenclature derived from the author's own modeling efforts publications and teaching over half a century Ambiguities in some concepts and tools are clarified and others are rendered more accessible and practical The latter include novel qualitative theory and methodologies for recognizing dynamical signatures in data using structural multicompartmental and network models and graph theory and analyzing structural and measurement data models for quantification feasibility The level is basic to intermediate with much emphasis on biomodeling from real biodata for use in real applications Introductory coverage of core mathematical concepts such as linear and nonlinear differential and difference equations Laplace transforms linear algebra probability statistics and stochastics topics The pertinent biology biochemistry biophysics or pharmacology for modeling are provided to support understanding the amalgam of math modeling with life sciences Strong emphasis on quantifying as well as building and analyzing biomodels includes methodology and computational tools for parameter identifiability and sensitivity analysis parameter estimation from real data model distinguishability and simplification and practical bioexperiment design and optimization Companion website provides solutions and program code for examples and exercises using Matlab Simulink VisSim SimBiology SAAMII AMIGO Copasi and SBML coded models A full set of PowerPoint slides are available from the author for teaching from his textbook He uses them to teach a 10 week quarter upper division course at UCLA which meets twice a week so there are 20 lectures They can easily be augmented or stretched for a 15 week semester course Importantly the slides are editable so they can be readily adapted to a lecturer's personal style and course content needs The lectures are based on excerpts from 12 of the first 13 chapters of DSBMS They are designed to highlight the key course material as a study guide and structure for students following the full text content The complete PowerPoint slide package 25 MB can be obtained by instructors or prospective instructors by emailing the author directly at joed@cs.ucla.edu

Systems Biology Jinzhi Lei, 2021-05-13 This book discusses the mathematical simulation of biological systems with a focus on the modeling of gene expression gene regulatory networks and stem cell regeneration The diffusion of morphogens is addressed by introducing various reaction diffusion equations based on different hypotheses concerning the process of morphogen gradient formation The robustness of steady state gradients is also covered through boundary value problems The introduction gives an overview of the relevant biological concepts cells DNA organism development and provides the requisite mathematical preliminaries on continuous dynamics and stochastic modeling A basic understanding of calculus is assumed The techniques described in this book encompass a wide range of mechanisms from

molecular behavior to population dynamics and the inclusion of recent developments in the literature together with first hand results make it an ideal reference for both new students and experienced researchers in the field of systems biology and applied mathematics

Dynamic Biosystem Modeling & Simulation Methodology - Integrated & Accessible Joseph DiStefano, 3rd, 2019-09-16 This textbook is uniquely crafted for use in teaching undergraduate students in the life math computer and other sciences and engineering It is INTRODUCTORY LEVEL for students who have taken or are currently completing their undergraduate math requirements and are acquiring analytical thinking and doing skills along with introductory biology chemistry and physics subject matter It s about learning HOW to model and simulate dynamic biological systems which also makes it useful for graduate students and professional researchers who want a more rigorous treatment of introductory life science math modeling integrated with the biology It brings together the multidisciplinary pedagogy of these subjects into a SINGLE INTRODUCTORY MODELING METHODOLOGY COURSE crystalizing the experience of an author who has been teaching dynamic biosystems modeling and simulation methodology for the life sciences for more than 50 years DiStefano maximizes accessibility and systems math biology integration without diminishing conceptual rigor Minimally essential applied math and SYSTEMS ENGINEERING METHODS are included along with a synopsis of the biology and physiology underlying dynamic biosystem modeling all in a modeling pedagogy context This textbook fills a major need in the training of contemporary biology students Dynamic biosystems modeling methodology is presented over 12 distinctive chapters primarily with systems diagrams and simple differential equations and algebra for expressing them quantitatively integrated with the biology Solving and analyzing quantifying the biomodels are then accomplished by simulation using a facile control system simulation language Simulink a GUI Matlab toolbox that emulates control systems diagramming rather than by coding the model in a standard computer programming language Students see and work with the system model not the code a big plus Higher math and complex analytical solutions are avoided Each chapter begins with a list of LEARNING GOALS to help with both perspective for the chapter material and retrospective to measure learning EXERCISES for the student at the end of each chapter are designed to test and reinforce learning A SOLUTIONS MANUAL for chapter exercises is available to qualified instructors from the author as are LECTURE SLIDES and LAB ASSIGNMENTS AND SOLUTIONS for courses that adopt the textbook for student use
