The combined effect of such a crash would be equivalent to a car slamming into a brick wall at 60 miles per hour. In both cases, energy is transferred from one object to the other — between the two cars, or between the car and the wall.

Clearly, the faster a car is traveling, the more energy it will transfer to the object — be it a car, a brick wall, or a guardrail. The exchange of energy between two cars that crash into each
