

## Introduction

Crayfish belong to the phylum *Arthropoda*, subphylum *Crustacea*. Arthropods make up the largest phylum of all of the plant and animal phyla. In addition to other crustaceans such as lobsters, shrimps, and crabs, animals like arachnids, insects, and centipedes are also considered to be in the arthropod phylum.

Crayfish are freshwater scavengers that live on the bottoms of rivers, streams, and ponds. They tend to hide under rocks and logs and feed on decaying plants and animals as well as fecal matter and small insects. They are by no means picky eaters!

Although this guide will strictly use the name crayfish, these animals have many other names. Crawdads, crawdaddies, and mudbugs are common names for them in the southeastern part of the United States, while crawfish and crayfish are more common in the northwest. In Australasia, crayfish are commonly called yabbies. They are considered a delicacy in many parts of the world, including the southeastern United States. Crayfish are also commonly used for fishing bait, and some are even kept as pets in freshwater aquariums. Unlike their relative, the lobster, crayfish only live in freshwater environments.

**Tool requirements:** Dissection scissors and a dissection pan or tray are required. Additional tools may be helpful, but are not required: a scalpel for precision cuts, a teasing needle for classroom demonstrations, and dissection forceps for rearranging or removing organs. Gloves and eye protection should always be worn when performing dissections. Work in an adequately ventilated area.
