

FIRST AID

2nd Edition

Accidents can happen, anywhere, anytime. Knowing how to provide proper care can save a life. First aid can range from calling emergency medical personnel (EMS) to performing more advanced procedures such as administering CPR. Guidelines in this chart are specific to "non-health care professionals."

STEP 1: SURVEY THE SCENE

- If there is any kind of danger, call Emergency Medical Services (EMS) (911) first.
- Ensure the scene is safe for you and others.
- Look for things that may threaten your safety, such as fire, electrical wires, or dangerous terrain.
- If you feel your safety is threatened, stay back and allow professionals to handle any dangerous situations.

STEP 2: CHECK FOR RESPONSIVENESS

- Gently tap casualty and shout "Are you okay?"
- If the casualty responds, begin a Secondary Survey (see pg. 26).
- If the casualty is unresponsive but appears to be breathing, use "First Aid for Conscious Adult or Child with Complete Airway Obstruction."
- If the casualty does not respond, send someone to call EMS (911). If no one else is available, place the call yourself, then return and begin the Primary Survey (see below).
- If you are alone and dealing with a child or infant, give care for 2 minutes first, then call EMS (911).

STEP 3: PRIMARY SURVEY

- The Primary Survey will help you to determine if any conditions threaten the casualty's life.
- Roll the casualty onto his or her back if they are not breathing or only gasping, or if the casualty's position keeps you from checking their breathing.
 - Roll the casualty on the side they are not facing.
 - Roll the casualty around you, "face upward", on a single roll - do not twist.
 - Support back of the casualty's head and neck.
- Check for signs (breathing) that the casualty is not breathing or only gasping and have called EMS (911).
- Breathing: **CAB** circulation, always, Breathing.
- If the casualty is breathing normally, proceed to step 4a, Check & Control Severe Bleeding.

- If the person starts breathing or begins to vomit, place them in recovery position (see pg. 27).
- If the person is showing signs of an injury or illness, provide ongoing casualty care until EMS (911) arrives.

STEP 3: PRIMARY SURVEY (CONT.)

3a. CIRCULATION: Begin Compressions

CPR for Adults (2+ Years)

Head Hand Position: (see Fig. 4)
 Place the heel of your hand on the person's sternum in the center (middle) breast chest region. Interlock fingers, then place the heel of the second hand on top of the first so that the hands are overlapped, interlocked, and parallel.

Give 30 Compressions (see Fig. 5)

- Position shoulders over hands.
- Compress sternum at least 2 inches (5 cm) down and up smoothly at a rate of at least 100 times per minute.
- Keep hands in contact with the chest at all times.
- Push hard, push fast. Allow for complete recoil of chest between compressions.
- If you break, check hand position and re-position, do not stop.

CPR for Children (1-8 Years)

Head Hand Position:
 Position in the center of the chest as for adult patients and you can use one of two hands to do compressions.

CPR for Infants (Under 1 Year)

Head-Neck-Finger Position: (see Fig. 4)
 Place two fingers on the middle of the chest (not below the infant's nipple).

Give 30 Compressions

- Compress sternum at least 1/2 inch (1 cm) down and up smoothly at a rate of at least 100 times per minute.
- Keep fingers in contact with the chest at all times.
- Push hard, push fast. Allow for complete recoil of chest between compressions.

3b. AIRWAY: Open the Airway

- "Do head-tilt-chin-lift" if neck injury is not suspected; see 3c.

Head-tilt-chin-lift: If suspected and the person is not breathing, "head-tilt-chin-lift" technique is preferred to all other airway opening techniques. It is the most important to get air into the person. Opening the airway may be more difficult to do and is therefore not recommended.

3c. BREATHING: Give 2 Full Breaths

- Mouth-to-mouth and give 2 breaths of air, each taking 1 second (see Fig. 6)

- Look it to go that chest rises as breath is given.
- If breath does not go in, adjust down by tilting the head further back (upward) and give another breath.

- The infant use a mouth-to-mouth nose technique (see Fig. 7).
- To do this, use your mouth to cover the infant's mouth and nose.
- If you have difficulty making airtight seal, use your nose to breathe into the infant's mouth.

BREATHS STILL DO NOT GO IN

- Do not stop the rescue breathing or allowing chest to rise, or that you do not start with complete airtight seal.

BREATHS GO IN

- Give another 30 compressions, 2 breaths (or 2 breaths, continued cycle until:
- The area becomes dangerous.
- You are too physically exhausted to continue.
- EMS (911) arrives.
- The person starts breathing or begins to wake.
- Another trained rescuer takes over.
- Someone arrives with an AED (Automated External Defibrillator).
