T  2. Most computer problems are not difficult ones for a support provider to handle.

T  3. Occasionally support agents encounter problems they have never seen before.

F  8. Problem solving, critical thinking, and decision making are different names for the same skill.

T  9. Problem solving often relies on a search for ways in which the current problem is similar to other problems.

F  10. In problem solving, a contradiction occurs when the current problem is unlike any problem a troubleshooter has experienced before.

F  11. A hypothesis is a sequence of trial-and-error guesses a troubleshooter makes to try to find a problem solution.

T  12. A troubleshooter who uses creative thinking is one who can see a problem from a new and different perspective.

F  16. Decision making is the ability to select the correct alternative from among all of the wrong alternative ways to solve a problem.

T  17. Active listening occurs when a support agent is as engaged in the communication process as the user who has a problem.

F  19. Restating a problem description using the user's exact words is called paraphrasing.

F  20. In troubleshooting a user problem, probing is the use of a volt-ohm meter to measure whether the input electrical voltage is within the specification.

T  21. The five critical questions described in this chapter are designed to force a troubleshooter to challenge the assumptions he or she may have made about a problem situation.

T  22. After a solution to a user problem has been found, an explanation is a communication where a support agent describes the solution so a user understands both the problem and the solution.

F  23. Verification is a troubleshooting procedure that tries to repeat the same problem on another PC.

T  24. The books and manuals in a troubleshooter's personal or professional library are part of his or her knowledge base.

F  25. A knowledge base is the personal experiences a support agent brings to the table to solve a problem.

F  26. Most hardware troubleshooters don't use Internet search engines to locate potential problem solutions because they rarely know the exact model number of hardware devices with problems.
