This text has invited more than 4 million students into the study of this dynamic and essential discipline. The authors have restructured each chapter around a conceptual framework of five or six big ideas. An Overview draws students in and sets the stage for the rest of the chapter; each numbered Concept Head announces the beginning of a new concept and Concept Check questions at the end of each chapter encourage students to assess their mastery of a given concept. New Inquiry Figures focus students on the experimental process and new Research Method Figures illustrate important techniques in biology. Each chapter ends with a Scientific Inquiry Question that asks students to apply scientific investigation skills to the content of the chapter.

Biology Gerald Audesirk, Teresa Audesirk, 1993. With the amount of information in biology growing constantly, it is a challenge for readers to develop a sense of scientific literacy and to become educated consumers. This volume helps readers manage a wealth of scientific information in a manner that is both meaningful and long-lasting. Features significant content revisions as well as new figures and photographs in every chapter. Includes an entirely new chapter on conservation biology. Presents approximately 40% new photos. Adds new bioethics icons to call out essays that relate to this timely topic. A comprehensive reference for anyone interested in learning more about biology.

Handbook of Agricultural Meteorology John F. Griffiths, 1994. Agricultural meteorology is concerned with the interactions between atmospheric hydrological factors and agriculture, which in its widest sense includes animal husbandry, forestry, and horticulture. This volume is an up-to-date handbook and guide to this important field. After discussion of the fundamental aspects of the atmospheric, edaphic, and biotic components of the ecosystem, the methods of measuring the important variables are reviewed, with both direct and remote sensing and managing the data taken into account. Discussion of the various agricultural aspects follows, including hydrologic facets, reviews of optimum conditions for temperate and tropical crops, as well as livestock, the relationship of pests and diseases to weather, and the role of the atmosphere in forest production. The final section explains weather services for agriculture, how to plan farm management in the light of weather information, the use of crop models, and how to modify existing climate. Economic implications are dealt with in relation to the futures market, while the last chapter considers food security on many time and size scales to assist in long-term planning.

Biology Teresa Audesirk, Gerald Audesirk, 1996. This text has been revised to reflect the changing dynamics of introductory biology. Emphasizing the importance of concepts over facts and critical thinking over memorization, it aims to present the dynamic processes at work in biology and convey the relevance and excitement of this discipline.
