  "contentFormat": "html",
  "content": "<p>Cache invalidation</p><p>Naming things</p>",
  "tags": ["development", "design"],

}
```

The definition of request data is equal to the regular call to create a post above. The response is identical except for adding one additional field:

Field	Type	Description
publicationId	string	ID of the publication this post was created under. This matches the publication ID requested in the URL of the request

There are additional rules around publishing that each request to this API must respect:

- If the authenticated user is an 'editor' for the publication, they can create posts with any publish status. Posts published as 'public' or 'unlisted' will appear in collection immediately, while posts created as 'draft' will remain in pending state under publication.
- If the authenticated user is a 'writer' for the chosen publication, they can only create a post as a 'draft'. That post will remain in pending state under publication until an editor for the publication approves it.
- If the authenticated user is neither a 'writer' nor an 'editor', they are not allowed to create any posts in a publication.

Possible errors:

Error code	Description
400 Bad Request	Required fields were invalid, not specified.
401 Unauthorized	The access token is invalid or has been revoked.
403 Forbidden	The <code>publicationId</code> in request path doesn't point to a publication that the user can publish into.
