

PRACTICAL 13: CODOMINANCE and INCOMPLETE DOMINANCE

Learning Objectives: • To explain the various types of dominance.

- To solve basic problems relating to the inheritance of dominant traits.

Problems. Answer All Questions & Show All Working

A1. Explain the difference between dominance, incomplete dominance and codominance.

Dominance is the way a gene or an allele is expressed over another, i.e. the dominant trait will be expressed even if only one copy of the gene is present and the recessive trait will be expressed only if two copies of the gene is present.

Incomplete dominance is where the heterozygotes phenotype expresses a mix of the parental phenotypes to give a 3rd phenotype; resembling neither of the parents.

Codominance is where both traits from the parent alleles are equally expressed in the 3rd phenotype that resembles both parents.

A2. In some chickens, the gene for feather color is controlled by codominance. The allele for black is **B** and the allele for white is **W**. The heterozygous phenotype is known as erminette.

- What is the genotype for black chickens? **BB**
- What is the genotype for white chickens? **WW**
- What is the genotype for erminette chickens? **BW**

A3. If two erminette chickens were crossed, what is the probability that:

- They would have a black chick? **25%**
- They would have a white chick? **25%**

Parents: **BW X BW**

	B	W
B	BB	BW
W	BW	WW

1BB: 2BW: 1WW

Black chick: 2 erminette chicks: white chick

A4. A black chicken and a white chicken are crossed. What is the probability that they will have erminette chicks? **100%**

Parents: **BB X WW**

	W	W
B	BW	BW
B	BW	BW

All BW, therefore, All erminette chicks
