

Review Questions

1. At what layer of the OSI model do proxy servers operate?
 - a. Layer 3
 - b. Layer 2
 - c. Layer 7
 - d. Layer 4

Answer: c. Layer 7

Explanation: Proxy servers manage security at **layer 7** of the OSI model. Some common criteria by which a packet-filtering firewall might accept or deny traffic at layers 3 and 4 include IP addresses, ports, and TCP flags. Application layer firewalls support filtering at the highest layers of the OSI model.

2. Which of the following ACL commands would permit web-browsing traffic from any IP address to any IP address?
 - a. `access-list acl_2 deny tcp any any`
 - b. `access-list acl_2 permit https any any`
 - c. `access-list acl_2 deny tcp host 2.2.2.2 host 3.3.3.3 eq www`
 - d. `access-list acl_2 permit icmp any any`

Answer: b. `access-list acl_2 permit http any any`

Explanation: Web-browsing traffic is identified by the protocols HTTP and HTTPS (not TCP or ICMP), which is permitted by the command `access-list acl_2 permit https any any`. Specifying addresses limits approved source or destination hosts.

3. Which of the following criteria can a packet-filtering firewall not use to determine whether to accept or deny traffic?
 - a. Destination IP address
 - b. SYN flags
 - c. Application data
 - d. ICMP message

Answer: c. Application data

Explanation: Application layer firewalls can block designated types of traffic based on **application data** contained within packets. However, packet-filtering firewalls are limited to information contained in layer 3 and 4 headers, such as IP addresses, TCP flags (such as the SYN flag), and protocols used (such as ICMP).

4. What information in a transmitted message might an IDS use to identify network threats?
