

Installation

BATTERY Make sure to write down the odometer value before changing the battery so you can later re-enter it in the odometer. Install the new battery with the positive (+) pole facing outward (Figure 1). After changing the battery all settings are erased.

Clamp the magnet to a spoke on the right side of the front wheel (Figure 2). Make sure that the magnet is facing the outside of the wheel so that the flat side of the magnet passes in front of the sensor.

Attach the speedometer sensor to the right fork leg using the two cable ties provided. Make sure the metal side of the sensor is facing the wheel. Do not fully secure the cable ties yet, as the sensor location might require further adjustments (Figure 3).

Adjust the sensor and magnet location so that clearance between the top is no greater than 1/5" (5mm) (Figure 4). Magnet should pass by the tip of the sensor.

Remove the adhesive tape shield on the back of the bracket and position the bracket on the handlebar of the bicycle. Fasten the O-ring around the top edge of the bracket and wrap around the underside of the handlebar and attach to the bottom edge of the bracket. Insert the computer into the mounting bracket and twist to the right to lock into place.
