The study looked at the medical records of thousands of angina patients whose doctors had chosen one of these treatments. It found that the average survival time of patients given drugs was the highest. What do you conclude?

- a) This study proves that drugs prolong life and should be the treatment of choice.
- b) We can conclude that drugs prolong life because the study was a comparative experiment.
- c) We can't conclude that drugs prolong life because the patients were volunteers.
- d) We can't conclude that drugs prolong life because the groups might differ in ways besides the treatment.
- e) We can't conclude that drugs prolong life because no placebo was used.

3. Ruby wanted to estimate the average amount of time that students at her school spend on Facebook each day. She gets an alphabetical roster of students in the school from the registrar's office and numbers the students from 1 to 1137. - c) It gave every possible sample of size 30 an equal chance to be selected.
