## Covalent Bonding Practice Worksheet

**Explanation:** Covalent compounds are compounds between nonmetal atoms. The atoms "start" with a number of electrons equal to their group number in the periodic table. Then they share electrons so that all the atoms have filled shells with a "magic number" of electrons. The magic number is 2 for hydrogen and 8 for C, N, O, F, Si, P, S, Cl, Se, Br and I. Remember that compounds made with a metal atom and a nonmetal atom make an ionic compound, not a covalent one, and compounds of metals are also different, these have metallic bonds and do not require a strict ratio.

**Instructions:** Fill in the blanks in the table. The first row is done for you; study the first row carefully before you start, especially the difference between different boxes (remember there are many ways to draw the same compound). Some rows have hints. If a box has an X you don't have to fill in that box.

**Helpful Tips:** 1) All atoms start with a number of outer shell electrons = their group number. You cannot change the element's group number. 2) If you have to choose between two shapes, the symmetrical, balanced one is usually best. 3) Try to figure the structures out yourself, don't cheat and use the Internet. ☺

[An Introduction to Chemistry](#) Michael Mosher, Paul Kelter, 2023-03-18 This textbook is written to thoroughly cover the topic of introductory chemistry in detail with specific references to examples of topics in common or everyday life It provides a major overview of topics typically found in first year chemistry courses in the USA The textbook is written in a conversational question based format with a well defined problem solving strategy and presented in a way to encourage readers to think like a chemist and to think outside of the box Numerous examples are presented in every chapter to aid students and provide helpful self learning tools The topics are arranged throughout the textbook in a traditional approach to the subject with the primary audience being undergraduate students and advanced high school students of chemistry

**Quantitative Analysis** C. T. Kenner, Kenneth W. Busch, 1979 Quantitative Analysis is adaptable to a wide range of analytical programs including single course with coverage of basic instrumental methods and gravimetric and volumetric principles as well as separate courses for non chemistry majors Quantitative Analysis stresses the principles and analytic capabilities of instruments rather than their design construction or operational details Enough material is given so that the student can understand techniques without being overwhelmed by detail Quantitative Analysis is not a reference work its scope has been limited to those techniques that are in widest use in research commercial and educational laboratories both in chemistry and related fields The first fifteen chapters of the text present material ordinarily treated in introductory analytical courses stressing volumetric and gravimetric analysis The next twelve chapters cover instrumental methods introductory separation science and automated analysis The final chapter illustrates the most widely used wet laboratory techniques Because most instructors prefer to design their own experiments no laboratory directions have been included The theoretical aspects of many widely used methods are discussed in detail however Quantitative Analysis offers these special features full coverage of the various means of expressing concentration an excellent treatment of solvent extraction to give the student an appreciation of the growing importance of extraction techniques in modern analysis and in liquid liquid partition chromatography a clear explanation of equivalent weights a complete discussion of rate methods of analysis a discussion of Raman spectroscopy in conjunction with infrared absorption as a complementary technique for determining information about molecular structure coverage of automated analysis in depth treatment of the theory of precipitation an introduction to more instrumental and separation techniques than is commonly found in textbooks at this level Publisher
