

**Chapter 8**  
**Understanding Populations**  
**8.1 How Populations Change in Size**  
**8.2 How Species Interact with Each Other**

**8.1 Objectives**

- Describe the three main properties of a population.
- Describe exponential population growth.
- Describe how the reproductive behavior of individuals can affect the growth rate of their population.
- Explain how population sizes in nature are regulated.

**What Is a Population?**

- \_\_\_\_\_ is a group of organisms of the same species that live in a specific geographical area and interbreed.
- A population is a reproductive group because organisms usually breed with members of their own population.
- The word *population* refers to the group in general and also to the size of the population, or the \_\_\_\_\_ it contains.

**Properties of Populations**

- \_\_\_\_\_ is the number of individuals of the same species in that live in a given unit of area.
- \_\_\_\_\_ is the pattern of distribution of organisms in a population. A population's dispersion may be even, clumped, or random.
- Size, density, dispersion, and other properties can be used to describe populations and to predict changes within them.

**How Does a Population Grow?**

- A population gains individuals with each new offspring or birth and loses them with each death.
- The resulting population change over time can be represented by the equation below.

**How Does a Population Grow?**

- \_\_\_\_\_ is an expression of the increase in the size of an organism or population over a given period of time. It is the birth rate minus the death rate.
- Overtime, the growth rates of populations change because birth rates and death rates increase or decrease.
- For this reason, growth rates can be \_\_\_\_\_.

### **Indigenous Concepts of Health and Healing in Andean Populations** Elizabeth Currie, John Schofield, 2024-08-29

This book uses archaeology and ethnohistory to explore the evidence for the survival of ancestral beliefs and practices related to health and healing in Indigenous Andean communities. The authors argue that through determining the nature of the survival of beliefs around health and healing, important insights are gained into how people develop adaptive strategies for survival in a way that allows a continuity of identity and integrity. The book works through various stages of research to arrive at its conclusions. Firstly, through archaeology and ethnohistory, it establishes a baseline of key ancestral pre-European Indigenous Andean beliefs related to health, illness, and healing. It then proceeds to review the evidence for the survival of these ancestral beliefs and practices related to Indigenous pre-European Andean epistemologies and ontologies. Analysing the results of the first two sections, the final part reflects on the narratives around ancestral beliefs and practices and how they influence lived experience in the contemporary world. In essence, this book deals with the question: How do people manage change, a universal question relevant to humanity at any time, and stresses the need to recognise the significance of cultural diversity, intangible heritage, and plurality. This interdisciplinary study is for researchers in ethnohistory, anthropology, medical anthropology, archaeology, history, heritage, and Indigenous studies.

### **Home Ranges of Animals** Roger A. Powell, 2025-10-21

Animals have tremendous agency to understand the world around them and to plan how to take best advantage of that world to meet their requirements. Their perception of the world differs from humans and includes knowledge emphasizing different senses. This book argues that to understand animals' home ranges, which are integral to the behavior and ecology of animals, biologists must understand their cognition of their environments. Presenting diverse complementary approaches to studying home ranges, this book shows how using multiple approaches sheds a broad light on how and why animals behave as they do. The book also provides many examples showing how hypothesis-driven research provides strong insights into animal behavior and ecology.
