When a net force acts on an object, the object's motion will change. This means that the object's speed or direction will change. However, if the net force is zero, the object's motion will not change. This means that the object will continue moving in the same direction at the same speed.</p> <p>Another way that forces can cause an object to change its motion is by changing its direction. This happens when a net force acts on an object that is moving in a straight line. The object will change its direction and continue moving in the new direction.</p> <p>Forces can also cause an object to accelerate. Acceleration is a change in velocity. This means that an object's speed or direction will change. For example, if a car is moving at a constant speed and a net force is applied to it, the car will accelerate. This means that the car's speed will increase or decrease.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> Which of the following is not a vector quantity? <ol style="list-style-type: none"> Force Acceleration Velocity Displacement Which of the following is not a vector quantity? <ol style="list-style-type: none"> Force Acceleration Velocity Displacement Which of the following is not a vector quantity? <ol style="list-style-type: none"> Force Acceleration Velocity Displacement Which of the following is not a vector quantity? <ol style="list-style-type: none"> Force Acceleration Velocity Displacement <div style="text-align: right;">  </div>
