

Evolution Study Guide

Evolution

- Who are the two people who developed ideas about the theory of evolution? **Charles Darwin & Alfred Russel Wallace**
 - Charles Darwin = natural selection --> evolutionary change
- What **three principles** make natural selection inevitable?
 - (1) Most characteristics of organisms are inherited, or passed from parent to offspring
 - (2) More offspring are produced than are able to survive, so resources for survival and reproduction are limited
 - (3) Offspring may vary among each other in regard to their characteristics and those variations are inherited
- Define natural selection and describe how natural selection drives evolution.
 - Natural selection a.k.a "survival of the fittest": the more prolific reproduction of individuals with favorable traits that survive environmental change because of those traits; this leads to evolutionary change
- What is fitness?
 - **Fitness = often quantitative = measured**
 - **Relative fitness:** how an individual compares to the other organisms in the POPULATION
 - Determines which individuals are contributing additional offspring to the next generation; thus, how the population might evolve

What are the two indicators of fitness (Slide 22)

Speciation

- The formation of new and distinct species in the course of evolution.
- Slide 18, watch JoVE video on speciation and diversity

Evidence for Evolution

- Be familiar with all types of evidence of evolution. Slides 7, 8, 12, 13, and 14.
 - **Fossils**
 - **Anatomy and Embryology**
 - Homologous structures: the synonymous parts
 - Vestigial structures: structures that have no apparent function at all and appear to be residual (leftover) parts from a past common ancestor
 - **Convergent evolution:** similar traits evolve INDEPENDENTLY in species that do not share a recent common ancestry
 - **Divergent evolution:** when 2 species evolve in diverse directions FROM A COMMON POINT
 - **Embryology:** the study of the development of the anatomy of an organism to its adult form
 - **Biogeography:** the geographic distribution of organisms on the planet follows patterns that are best explained by evolution in conjunction with the movement of tectonic plates over geological time
