Our food provides the building blocks that our cells need to perform all the chemical reactions needed to sustain life. Humans have a digestive tract (gut) that runs from the mouth, through the body, and ends at the anus. There are accessory organs that assist in digestion such as the liver, gall bladder, and pancreas. The digestive process involves five activities known as: ingestion (eating), movement of food, digestion (breakdown of food), absorption (taking in nutrients from food), and elimination (removal of waste.)

1. Record the 5 activities of the digestive system and use each term in its own complete sentence. The first one is done for you.
