Dimplex Owners Manual

Pauline Webb, Mark Suggitt

Dimplex Owners Manual:

Mergent Industrial Manual ,2003 *English Mechanic and Mirror of Science* ,1883 *Evaluating a Small Structural Insulated Panel (SIP) Designed Solar Kiln in Southwestern New Mexico* Richard D. Bergman,2012 pinyon pine *Pinus edulis* single length lumber was dried from an average of 32.6% to 5.5% final MC in 56 days a considerably slower drying process that could be at least partially explained by pinyon pine's wood anatomy and also by poor weather conditions and cooler temperatures. In addition even with the SIP kiln designed to keep the heat gained during the day in the kiln at night the solar kiln operated considerably worse during the winter months of year 2 when compared with a small dehumidification dry kiln. Recommendations for improving the kiln performance included installing two additional deck fans and setting the plenum space to the correct width to both improve and provide more uniform airflow. After implementing the suggested recommendations further tests would be needed for drying pinyon pine. Additional runs would evaluate the capability of the solar SIP kiln to dry pinyon pine as well as it did for drying ponderosa pine.
