BI-DIRECTIONAL VALVE WITH FLOW-SELECTABLE FEATURE

Installation of valve

The valve is a bi-directional valve* and can be installed horizontally or vertically in either the flow or return pipe. A built in flow direction selection feature can be used to eliminate the risk of water hammer.

Troubleshooting

In the unlikely event of water hammer being encountered turn the setting ring (see diagram 4) to the other setting. Alternatively if commissioning the whole system, establish the flow direction through each valve using the diagrams below. If the flow direction needs to be changed there is no need to remove the valve, simply turn the setting ring.

1 Close all radiator valves by turning the valve cover cap clockwise. Leave system to cool.

2 Start boiler/heating.

3 Open one valve and determine flow direction. Which pipe heats first?

4 Remove cap and turn setting ring according to the drawings right.

5 Repeat step 3 and 4 until all valves have been set correctly. Sensor may now be fitted or the valve cap temporarily refitted.

* Maximum pressure drop should not exceed 0.45 bar
