Goals for Understanding

Students will learn what matter is and explore different states of matter.

Objectives

Students will

- classify matter in various ways (size, shape, color, etc.).
- explore and record types of matter found outdoors.
- experiment with the energy of gas.

Materials Needed (See science activity appended for additional materials.)

- crayon, water, balloon
- two baskets
- sketch pads (or digital cameras or other photographic device)

Anticipatory Set

Gather a collection of solid, liquid, and gas items. (Suggestions: crayon, bottle of water, balloon) Have children sit in a circle. Hand an object to one child and ask him/her to use one word to describe it—heavy, thick, yellow, etc. Pass the object to students in the circle letting them add a descriptive word. Limit each child to one word. Record responses. Continue around the circle with each child adding a word and repeating the other words until everyone has had a turn. Begin again with another object. Explain that these objects—solid, liquid, and gas—are **matter**.

Instruction (I/Teacher's role)

Review key content words: (liquid, solid, gas, shape, weight).

Explain that matter is something that has weight and takes up space. Ask: What are some things that have weight and take up space? Point out that even though we do not see air, it is matter.

- **Matter** has three states: solid (a block), liquid (water), and gas (air).
- **Solids** have shapes. You can see and feel solids (crayon). Solids cannot change shape on their own, but force can change them (break a crayon). Its particles are packed tightly together.
- **Liquids** do not have shapes of their own. They take the shape of the container they are in (milk). Particles in a liquid can move around and past each other freely.
- **Gases** are matter that are difficult to see. They have no specific shape or size, but they do have weight and take up space (steam). The air we breathe is made up of gases. Particles in gases move around freely and quickly.
- **Plasma** is a fourth state of matter (not included in this lesson). Plasma does not have a shape, but it cannot be classified a gas, liquid, or solid. (Examples are lightning, fire, neon lights.) Plasma particles start as a substance similar to a gas, but change when the particles break up.
