

Does
on wet

bread mold grow
bread or dry

faster
bread?

By Charlene A. Shobara

HYPOTHESIS

I thought that bread mold would grow faster on wet bread than on dry bread.

MATERIALS

- 1 loaf of white bread
- 1 loaf of whole wheat bread
- 1 plastic bag
- 1 plastic container

PROCEDURES

Step 1: Cut the bread into two equal pieces.
Step 2: Place one piece in a plastic bag and seal it.
Step 3: Place the other piece in a plastic container and seal it.
Step 4: Place the bagged bread in a warm, dark place.
Step 5: Place the bread in the container in a warm, dark place.
Step 6: Observe the bread every day for mold growth.

I thought that bread mold would grow faster on wet bread than on dry bread.

OBSERVATIONS

The observations section contains a grid of approximately 15 small photographs. Each photo shows a slice of bread with varying degrees of mold growth. Some photos are highlighted with orange borders, while others have blue borders. The mold appears as fuzzy, greenish or brownish patches on the surface of the bread.

CONCLUSIONS

The bread that was kept in the plastic bag and sealed with a rubber band grew mold faster than the bread that was kept in the plastic container and sealed with a rubber band.

Based on my observations, the bread that was kept in the plastic bag and sealed with a rubber band grew mold faster than the bread that was kept in the plastic container and sealed with a rubber band.

The bread that was kept in the plastic bag and sealed with a rubber band grew mold faster than the bread that was kept in the plastic container and sealed with a rubber band.

4th Grade Science Fair Project Ideas
