THE HEART

The organ that pumps blood throughout the body

Objectives

- 1. Describe the structure and function of the heart.
- 2. Explain the relationship between structure and function.
- 3. Identify the major components of the heart.

Structure and Function

The heart is a muscular organ that pumps blood throughout the body. It is responsible for delivering oxygen and nutrients to the cells and removing waste products.

Key Concepts

- Heart Structure:** The physical form and organization of the heart.
- Heart Function:** The processes and actions that the heart performs.
- Heart Homeostasis:** The heart's ability to maintain a stable internal environment.

THE LUNG

The organ that filters oxygen from the air

Objectives

- 1. Describe the structure and function of the lung.
- 2. Explain the relationship between structure and function.
- 3. Identify the major components of the lung.

Structure and Function

The lung is a large, spongy organ that filters oxygen from the air. It is responsible for exchanging oxygen and carbon dioxide between the air and the blood.

Key Concepts

- Lung Structure:** The physical form and organization of the lung.
- Lung Function:** The processes and actions that the lung performs.
- Lung Homeostasis:** The lung's ability to maintain a stable internal environment.

NERVOUS SYSTEM

The system that controls and coordinates the body's activities

Objectives

- 1. Describe the structure and function of the nervous system.
- 2. Explain the relationship between structure and function.
- 3. Identify the major components of the nervous system.

Structure and Function

The nervous system is the system that controls and coordinates the body's activities. It is responsible for processing information and sending signals to the rest of the body.

Key Concepts

- Nervous System Structure:** The physical form and organization of the nervous system.
- Nervous System Function:** The processes and actions that the nervous system performs.
- Nervous System Homeostasis:** The nervous system's ability to maintain a stable internal environment.

THE SKIN

The largest organ of the body and the first line of defense

Objectives

- 1. Describe the structure and function of the skin.
- 2. Explain the relationship between structure and function.
- 3. Identify the major components of the skin.

Structure and Function

The skin is the largest organ of the body and the first line of defense. It is responsible for protecting the body from external damage and regulating body temperature.

Key Concepts

- Skin Structure:** The physical form and organization of the skin.
- Skin Function:** The processes and actions that the skin performs.
- Skin Homeostasis:** The skin's ability to maintain a stable internal environment.

OTHER PARTS OF THE BODY

The various organs and systems that make up the human body

Objectives

- 1. Describe the structure and function of the various organs and systems.
- 2. Explain the relationship between structure and function.
- 3. Identify the major components of the various organs and systems.

Structure and Function

The various organs and systems of the body work together to maintain homeostasis and support life. Each organ has a specific function that is essential for the body's overall health.

Key Concepts

- Organ Structure:** The physical form and organization of the organ.
- Organ Function:** The processes and actions that the organ performs.
- Organ Homeostasis:** The organ's ability to maintain a stable internal environment.

ENDOCRINE SYSTEM

The system that regulates the body's metabolism and growth

Objectives

- 1. Describe the structure and function of the endocrine system.
- 2. Explain the relationship between structure and function.
- 3. Identify the major components of the endocrine system.

Structure and Function

The endocrine system is the system that regulates the body's metabolism and growth. It is responsible for producing and releasing hormones that control various body functions.

Key Concepts

- Endocrine System Structure:** The physical form and organization of the endocrine system.
- Endocrine System Function:** The processes and actions that the endocrine system performs.
- Endocrine System Homeostasis:** The endocrine system's ability to maintain a stable internal environment.
