

**BIOLOGY SOL REVIEW QUESTIONS****Part I: Scientific Investigation**

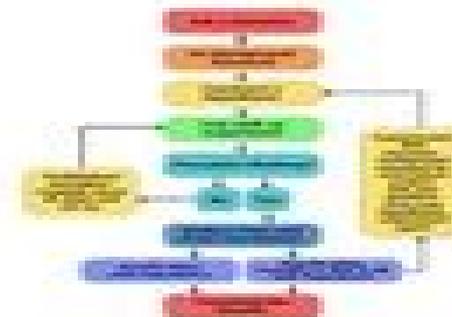

1. Observation - act of gathering information about a specimen or environment using one or more of the five senses.
2. Inference - a conclusion based on prior knowledge or information.
3. Hypothesis - "educated guess" or predicted solution to a problem.
4. Variables - factors that change and can be measured in the experiment.
5. Independent - the variable that you change or perform.
6. Dependent - The variable that changes because of changing the I.V.
7. Control Group - A standard against which experimental results can be measured.
8. Constants - Things that are kept the same in the experiment.
9. Example 5 scenario -

Jack wanted to test which brand of car wax was most effective. He tested four brands of wax. He cleaned the hood of his car and removed the old wax. He measured four equal sections on the hood of the car. Each of the waxes was used to cover a section. An equal amount of wax, the same type of rag, and equal buffing were used. Five drops of water were placed on each square, and the diameter of each drop was measured (and quantitated). Jack could have used a qualitative dependent variable by developing a rating scale for amount of shine, from dull to very shiny.

Independent Variable = brand of car wax

Dependent Variable = size/diam. of drops

Constants = equal amt. of wax, same type of rag, equal buffing

**Graphing**

10. Each graph consists of a vertical axis that intersects a horizontal axis at the origin.
11. The independent variable is recorded on the horizontal or x-axis.
12. The dependent variable is recorded on the vertical or y-axis.
13. There are four types of relationships in a line graph.
  - i. Direct relationship - as the I.V. increases the D.V. increases
  - ii. Inverse Relationship - as the I.V. increases the dependent variable decreases
  - iii. Constant Relationship - as the I.V. increases, the dependent variable remains the same
  - iv. Cyclical Relationship - as the I.V. increases, the D.V. increases up to a certain point, after which the dependent variable decreases
