Guide for Training Crew Leaders ,1988 **Rehearsing for Doomsday** Scott Cook,2021-10-20 In 1988 Scott Cook was a boarding school PE teacher responsible for the proper inflation of dodge balls A year later he was operating an underground strategic missile control center with 10 intercontinental nuclear weapons capable of obliterating an entire country This unexpected journey took him from the serene hills of Virginia through months of intensive training on the California coast to the front lines of the Cold War beneath the frozen plains of North Dakota His frank entertaining memoir describes the insular and secretive military subculture of men and women who lived with the sobering burden of potentially unleashing global devastation and how an easy going gym coach ended up in an organization whose unofficial motto was To err is human to forgive is not Strategic Air Command policy Fidelity Analysis for the OH-58D Kiowa Warrior Crew Trainer John E.

Stewart,1998 The Army must balance cost and training effectiveness in acquiring a Kiowa Warrior Crew Trainer KWCT This entails determining the least fidelity required for specific training objectives employing the least costly technology A fidelity analysis was conducted which involved a analysis of training requirements b review of the literature and c empirical assessment of a benchmark KWCT Subject matter experts SMEs identified 13 tasks for which training in the aircraft alone was inadequate It was concluded that the KWCT should train these tasks under the full range of visibility conditions and when affected by obscurants The literature revealed virtually no data on display resolution required to train tasks other than target detection and identification It also implied that a visual display system with adequate field of view FOV and resolution for target detection and identification at realistic standoff ranges would be prohibitively expensive For the benchmark KWCT assessment small sample size made performance evaluation difficult Gunnery was more affected by degraded depth cues when resolution was low 480 lines than when high 768 lines Low resolution was perceived as inadequate for all tasks and high resolution as marginally adequate for gunnery FOV was perceived as less critical to gunnery than to general flying
