Gravity. 	<p style="text-align: center;">Forces and Motion</p> <hr/> <p>Read the passage carefully before answering the questions that follow.</p> <div style="border: 1px solid black; padding: 10px;"> <p>There are different ways that forces interact to cause an object to change its motion. When multiple forces act on an object, they combine to produce a net force, which determines whether the object speeds up, slows down, or changes direction. Understanding how forces act together is essential to explaining various observations from a physics world, such as a ball's trajectory or a car's acceleration.</p> <p>Newton's second law states that the acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass. This means that if the net force increases, the acceleration increases proportionally, but if the mass increases, the acceleration decreases. For example, pushing a heavy box with a small force will result in a small acceleration, while pushing a lighter box with the same force will result in a larger acceleration.</p> <p>Newton's third law describes the difficulty of applying a net force to an object with a large mass. It states that for every action, there is an equal and opposite reaction. This means that if you push on a wall, the wall pushes back on you with an equal force. This is why it is difficult to move a heavy object by yourself. The reaction force is equal in magnitude to the action force, but it acts in the opposite direction. This is why you feel a force on your hand when you push on a wall.</p> </div> <p>Answer the correct answer for each question.</p> <ol style="list-style-type: none"> Which of the following is not a type of contact force? <ol style="list-style-type: none"> Friction force Gravitational force Normal force Applied force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Friction force Gravitational force Normal force Applied force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Friction force Gravitational force Normal force Applied force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Friction force Gravitational force Normal force Applied force <div style="text-align: right;">  </div>
