

Nature Vs Nurture Essay Example

Nature vs. Nurture is a topic that has been long debated by psychologist and everyday individuals alike. Twin studies have been used by scientists to provide enlightenment on environmental and hereditary influences on behavioral development. While certain elements in a child's upbringing and environment are bound to influence the way he or she will grow up to socialize, interact, and internalize this world we live in, researchers are interested in the relative importance of genetic predispositions.

Our social and antagonistic experiences help to shape our personality and mental development, but what about what has already been "wired" into our DNA? We can physically see that characteristics like height, weight, hair color, eye color, and other facial and body characteristics can be passed from parent to child. However, epigenetics research often questions if mental or behavioral characteristics such as personality traits, or mental abilities are also etched into our DNA.

Although inquisitiveness about the importance of both environment and heredity has existed for centuries, scientists are at the earliest stages of investigating which factor plays a bigger role. (Powledge 2011) Inconsistencies in the arguments between leading psychologists have led to the reformation of the "nature - nurture" theory. Since heredity and environment have been proven to both influence our future outcomes the only fair question that can be posed is "How Much" of a role does either side play in the mental and physical development of a child.

One of the most amazing things in science is the study of multiples. For decades, psychologists have tracked the growth, development and mental capabilities of twins, triplets, etc. Identical twins specifically, who originate from a single sperm and egg share the same genetic make-up, yet this does not mean that they are exactly alike. Environmental factors, as well as chemical changes within DNA influence the physical appearance and personality of twins as they age. Hypothetically, the separation of these monozygotic creatures would answer any question about which factor has more influence- nature or nurture.

But, since it is ethically impossible to separate identical twins and provide the EXACT same environmental factors, many questions have been left unanswered by the few known cases of intended separation. During the 1950s and 60's, a leading expert in psychiatry, Dr. Peter Neubauer, collaborated with a New York City adoption agency to conduct a research project on the nature vs. nurture debate known as the Minnesota Twin Studied. Five sets of identical twins and one set of triplets were all separated from their fellow sibling(s) during early infancy and studied intermittently through the course of their childhood.

Neubauer, along with a consultant to the agency, child psychologist Viola Bernard, believed that twins were a burden to parents and should be raised separately to improve thei

The "(no) negative evidence" problem: Nativist and social interactionist views on how children recover from grammatical errors Bünyamin Yuvarlak,2021-03-23 Seminar paper from the year 2019 in the subject English Language and Literature Studies Linguistics grade 1 3 University of Bonn Institut f r Anglistik Amerikanistik und Keltologie course Language Acquisition Psycholinguistik language English abstract This paper aims at exploring how the views on language acquisition have developed over time where they conflict each other and whether it is possible to position oneself on either side The nature vs nurture debate is an everlasting discussion not only in the area of linguistics but science in general This is what makes it particularly interesting because there is always new information to expect Furthermore it is an issue not limited to academic discourse only but one that appears in everyday conversation An interesting aspect of language acquisition more specifically the knowledge of language is the question if children arrive at such knowledge by the mere exposure to positive evidence i e the language of adults they are surrounded with or if negative evidence also has an impact i

e children's knowledge of language is based on explicit or implicit feedback to whether an utterance was in some way incorrect. The two terms will be defined and looked into in more detail in the second chapter. In the following, the correlation between the nature vs nurture debate and language acquisition will be explained. First, the respective chapter provides a brief insight into how the nativist approach developed, mainly based on Chomsky's 1988 notion of Universal Grammar (UG) and the type of criticism it brought along. It further explains the connection between the respective theories and the grammatical aspect of language acquisition. In the last section, the main problems of experience-based language learning will be displayed and defined. The third chapter starts with a section dedicated to where the particular view that humans need innate structures for a correct knowledge of language stems from. It continues with a detailed look on the no negative evidence problem. The non-existence of negative evidence and which role it plays in terms of language acquisition will be explored from different standpoints by nativists as well as non-nativists.

Picking up the Pieces Mustafa Chowdhury, 2015-07-07
 Chowdhury describes the journeys to Canada of the first contingent of 15 war babies that were embraced by their adoptive parents when they reached their new homes in Canada in July 1972, breaking the racial boundaries and re-defining what a family could be. Products of one of the most outrageous crimes, these babies were conceived by Bangladeshi women, victims of sexual crimes committed by the Pakistani military personnel in Occupied Bangladesh. Since it was a case of enforced pregnancy through penile penetration against the will of the victims, the undesirable newborns were seen as disposable or throw-away babies by both the birth mothers and the Bangladeshi society. Through sharp analysis, Chowdhury has illustrated with poignant vignettes an important fact of life: that human beings desire and need close relationships. Using archival records from the International Social Service, International Planned Parenthood Federation Library and Archives, Canada Department of External Affairs and Manpower and Immigration in Canada, and the Department of Labour and Welfare of the Government of Bangladesh, Missionaries of Charity, and the Families For Children, Chowdhury examined the well-being of the war babies and their parents through the years, with anecdotes of their rearing, nurturing, and becoming adults in Canada, the country they call home.
