Exercise Sets New true false exercises and new expository writing exercises have been added Making Connections Contains a select group of exercises that draw on ideas developed in the entire chapter rather than focusing on a single section as with the regular exercise sets Centroids and Center of Gravity A new section on centroids and center of gravity in two dimensions is now included Chapter 6 Visualization Illustrations make extensive use of modern computer graphics to clarify concepts and to develop the student s ability to visualize mathematical objects particularly those

in 3 space For students working with graphing technology many exercises develop the ability to generate and analyze mathematical curves and surfaces New Chapter 0 The precalculus review material from Chapter 1 is now in Chapter 0 a chapter which focuses exclusively on the preliminary topics that students need to start the calculus course Parametric equations reorganized This edition returns to the traditional organization the material on parametric equations is now first introduced and then discussed in detail in Section 10.1 Parametric Curves However to support those instructors who want to continue the 8th edition path of giving an early exposure to parametric curves web materials and self contained exercise sets on the topic in Section 6.4 are available Differential equations reorganized The chapter on differential equations has been reordered and revised so that instructors who cover only separable equations can do so without a forced diversion into general first order equations and other unrelated topics This chapter can be skipped entirely by those who do not cover differential equations at all in calculus Related Rates and Local Linearity The sections on related rates and local linearity now follow the sections on implicit differentiation and logarithmic exponential and inverse trigonometric functions making a richer variety of techniques and functions available to study related rates and local linearity Rectilinear Motion Reorganized Aspects of rectilinear motion that were discussed in the introductory discussion of derivatives in the 8th edition have been deferred so as to not distract from the primary task of developing the notion of the derivative This also provides a less fragmented development of rectilinear motion Additional Student Friendly Reorganization The sections Graphing Functions Using Calculators and Computer Algebra Systems and Mathematical Models are now text appendices and the section Second Order Linear Homogeneous Differential Equations The Vibrating String is now posted on the web site that supports this text Readability Balanced with Rigor The authors goal is to present precise mathematics to the fullest extent possible in an introductory treatment Commitment to Student Success Clear writing effective pedagogy including special exercises designed for self assessment and visual representations of the mathematics help students from a variety of backgrounds to learn Recognizing variations in learning styles the authors take a rule of four approach presenting concepts from the verbal algebraic visual and numerical points of view to foster deeper understanding whenever appropriate Dependability Anton provides thorough topic coverage organized to fit standard curricula and carefully constructed exercise sets that users of previous editions have come to depend upon Flexibility This edition is designed to serve a broad spectrum of calculus philosophies from traditional to reform Technology can be emphasized or not and the order of many topics can be adapted to accommodate each instructor s specific needs Quick Check Exercises Each exercise set begins with approximately five exercises answers included that are designed to provide the student with an immediate assessment of whether he or she has mastered key ideas from the section They require a minimum of computation and can usually be answered by filling in the blanks Focus on Concepts Exercises Each exercise set contains a clearly identified group of problems that focus on the main ideas of the section Technology Exercises Most sections include exercises that are designed to be solve using either a

graphing calculator or a computer algebra system such as Mathematica Maple or Derive These exercises are marked with an icon for easy identification Expository Excellence Clear explanations allow students to build confidence and provide flexibility for the instructor to use class time for problem solving applications and explanation of difficult concepts Mathematical Level The book is written at a mathematical level that is suitable for students planning on careers in engineering or science Applicability of Calculus One of the primary goals of this text is to link calculus to the real world and the student's own experience This theme is carried through in the examples and exercises Historical Notes The biographies and historical notes have been a hallmark of this text from its first edition and have been maintained in this edition All of the biographical materials have been distilled from standard sources with the goal of capturing the personalities of the great mathematicians and bringing them to life for the student
