

Chemistry – Unit 6 Worksheet 2

We have observed evidence that atoms of ^{12}C (graphite) are identical, the same particles used to form completely different structures (diamond, graphite), particles used to form completely different molecules (Ethane) when the same atoms used. Particles used (particles are identical to form completely different structures) are called as atoms. We will now examine the particles that form the other atoms or molecules (these atoms & molecules are called as isotopes) that change at the same time.

1. Write the formulae and draw the particle diagrams for each compound. The table of ions to work compound is given.
