

# Chapter 2: Cell division

## Knowledge organiser

### Chromosomes

The nucleus of a cell contains chromosomes.

Each chromosome carries a large number of genes made of DNA molecules.

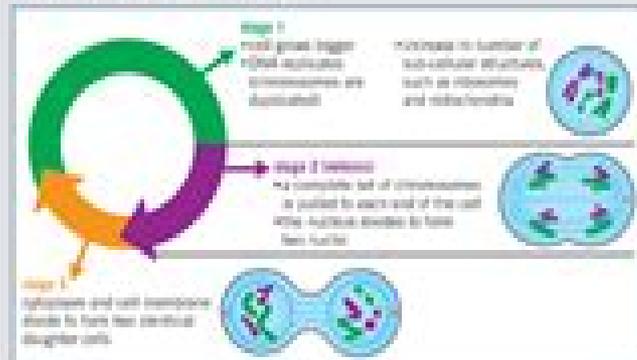

### The cell cycle

Body cells divide to form two identical **daughter cells** by going through a series of stages known as the **cell cycle**.

Cell division by **mitosis** is important for the growth and repair of cells, for example, the replacement of skin cells. Mitosis is also used for asexual reproduction.

There are three main stages in the cell cycle:

### Stem cells in medicine

A stem cell is an undifferentiated cell that can develop into one or more types of specialised cell.

There are two types of stem cell in mammals: **adult stem cells** and **embryonic stem cells**.

Stem cells can be **cloned** to produce large numbers of identical cells.

Type of stem cell	Where are they found?	What can they differentiate into?	Advantages	Disadvantages
adult stem cells	specific parts of the body in adults and children - for example, bone marrow	can only differentiate to form certain types of cells - for example, stem cells in bone marrow can only differentiate into types of blood cell	<ul style="list-style-type: none"> <li>stem cell harvest - adults can consent to have their stem cells removed and used</li> <li>already established technique for treating diseases such as leukaemia</li> <li>adults can be used as a treatment and donors recover quickly</li> </ul>	<ul style="list-style-type: none"> <li>requires a donor, potentially meaning a long wait time to find someone suitable</li> <li>can only differentiate into certain types of specialised cells (so can't be used to treat their disease)</li> </ul>
embryonic stem cells	early human embryos (often taken from spare embryos from fertility clinics)	can differentiate into any type of specialised cell in the body - for example, a stem cell in a muscle cell	<ul style="list-style-type: none"> <li>can create a wide range of diseases or can form any specialised cell</li> <li>may be possible to grow whole replacement organs</li> <li>usually no donor needed as they are obtained from spare embryos from fertility clinics</li> </ul>	<ul style="list-style-type: none"> <li>ethical issues as the embryos to be destroyed and each embryo is a potential human life</li> <li>risk of transforming and infection to the patient</li> <li>more treatment is relatively under-researched - not yet clear if they can cure as many diseases as thought</li> </ul>
plant techniques	various regions in the roots and shoots of plants	can differentiate into all cell types - they can be used to make clones of other plants	<ul style="list-style-type: none"> <li>new species of plants can be cloned to protect extinction</li> <li>plants with desirable traits, such as disease resistance, can be cloned to produce large numbers of identical plants</li> <li>fast and low cost production of large numbers of plants</li> </ul>	<ul style="list-style-type: none"> <li>cloned plants are genetically identical, so a whole crop is at risk of being destroyed by a single disease or pest that without</li> </ul>

### Binary fission

Cell division in bacteria is called binary fission. In optimum temperature and nutrients, bacteria can multiply as often as every 20 minutes. In a lab, bacteria can be grown in sterile conditions on an agar gel plate or in a nutrient broth.

The lid of the petri dish must be washed but not all the way so that bacteria can still get in. This is so that harmful bacteria that do not need oxygen aren't able to grow.

### Therapeutic cloning

#### In therapeutic cloning

- cells from a patient's own body are used to create a cloned early embryo of themselves
- stem cells from this embryo can be used for medical treatments and growing new organs
- these stem cells have the same genes as the patient, so are less likely to be rejected when transplanted

#### Key terms

Make sure you can write a definition for these key terms.

adult stem cell binary fission cell cycle  
 chromosome clone daughter cells embryonic stem cell  
 gene mutation nucleus therapeutic cloning
