

CHAPTER 4 CONSTRUCTION DRAWINGS

4.1 GRAPHICAL STANDARDS

All Construction Drawings shall be created as per procedures specified in the current version of the MassDOT Highway Division CAD Standards Manual.

4.2 PREPARATION OF CONSTRUCTION DRAWINGS

4.2.1 General

4.2.1.1 Construction Drawings shall clearly and accurately depict all pertinent aspects and details necessary to construct the proposed structure. They shall be organized in a logical sequence, as outlined below, which follows the flow of the construction work. Ideally, related details should be grouped on the same sheet. If this is not possible, related details should then be located on adjacent sheets so that flipping between sheets is minimized. In no way should related details be scattered throughout the construction drawings. Appropriate scales shall be used to show a clear presentation of the details of the structure.

Sections shall be numbered in consecutive order from the start to the end of the bridge construction drawings. The first section that appears on the bridge construction drawings shall be Section 1 and there shall be no repetition of any section number. Details shall be identified by a title or by a letter consistent with the Bridge Manual drawings. The first detail identified by a letter that appears on the bridge construction drawings shall be Detail A and subsequently lettered details shall be organized in an alphabetical sequence without repetition.

4.2.1.2 The baseline of survey shall be the basic reference line for the layout of the bridge. The centerlines of bearings on the abutments and piers shall be the basic lines to be tied to the baseline of survey. Thus, the beam layout, footing layout, Construction Drawings of piers and abutments should be referenced by the station of the intersection of the baseline and the centerline of bearings and by the angle between them. In some cases, the baseline of survey may be away from the structure, in which case the centerline of construction shall be used. Where the bridge is on a curve, the skew angles of the centerlines of bearings of the beams should be computed to a tangent to the horizontal curve at the centerline of bearings, and all offsets for the layout should be at right angles to that tangent. Radial offsets to the curve are not acceptable.

4.2.1.3 Construction Drawings shall be drafted on mylar (plastic drafting film) having a minimum thickness of 4 mils and, preferably, matte on one side only.

4.2.1.4 The standard sheet size shall be as shown on Drawing No. 1.1.1 of Part II of this Bridge Manual.

4.2.2 Organization

4.2.2.1 The following is an accepted sequence for organizing Construction Drawings:
