DATABASE MANAGEMENT SYSTEMS

REVIEW QUESTIONS

1. Database planning, design, implementation, operation and maintenance, and change and growth.
2. The users, the database management system, the database administrator, and the physical database structures.
3. The primary difference between the network and hierarchical models is in the parent-child relationship. The network model allows a child file to have multiple parents. The hierarchical model permits a child to be associated with only one parent record.
4.
 - a. Less data redundancy
 - b. Single update of data
 - c. Current values for all user applications
 - d. Task-data independence.
5. Program development, backup and recovery, database usage reporting, and database access.
6. One level is the schema, which is the conceptual view of the data. The schema describes the entire database, and it represents the database logically. The second level is the internal view which is the physical arrangement of the records. At this level, the physical data records are described as well as linkages between files. The next level is the subschema, which is the external view of the database that specific users have authorization to use. This is also called the user view. This is the level that users find of most interest.
7. The primary key is a table attribute the value of which is unique to the record. It is a unique identifier.
8. Logically related tables need to be physically connected to achieve the associations described in the data model. This is accomplished by embedding the primary key of one table into the related table as a foreign key.
9. The data dictionary describes every data element in the database. The data dictionary enables all users (and programmers) to share a common view of the data resource, thus facilitating greatly the analysis of user needs.
10. An organization has three diverse operating units: tractors, sewing machines, and computer chips. These units have different customers, suppliers, and production facilities. Operating data are consolidated for financial reporting only.
11. An entity is anything about which the organization wishes to capture data. Entities may be physical, such as "Inventory", "Customer", or "Employee". They may also be conceptual, such as "Sale" (to a customer), "Accounts Receivable", or "Accounts Payable".
