When multiple forces act on an object, they combine to produce a net force, which determines whether the object speeds up, slows down, or changes direction. Understanding how forces act together is essential to explaining various observations from a physics world, such as a ball's trajectory or a car's acceleration.</p> <p>Newton's second law of motion states that the acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass. This means that if the net force increases, the acceleration increases proportionally, and if the mass increases, the acceleration decreases proportionally for a given force.</p> <p>Newton's third law states that for every action, there is an equal and opposite reaction. This means that if one object exerts a force on another, the second object exerts an equal and opposite force on the first. This principle is essential for understanding the motion of objects in contact, such as a ball hitting a wall or a person jumping.</p> <p>Friction is a force that opposes motion between two surfaces in contact. It acts in the opposite direction of the object's velocity and is caused by the microscopic irregularities of the surfaces. Friction is essential for many everyday activities, such as walking, driving, and holding objects. Without friction, objects would slide across surfaces and it would be impossible to walk or drive.</p> </div> <p>Answer the correct answer for each question.</p> <ol style="list-style-type: none"> Which of the following is not a contact force? <ol style="list-style-type: none"> Normal force Friction Gravitational force Applied force Which of the following is not a contact force? <ol style="list-style-type: none"> Normal force Friction Gravitational force Applied force Which of the following is not a contact force? <ol style="list-style-type: none"> Normal force Friction Gravitational force Applied force Which of the following is not a contact force? <ol style="list-style-type: none"> Normal force Friction Gravitational force Applied force <div style="text-align: right;">  </div>
