Automotive Sensory Systems C. Nwagboso, 2012-12-06 The rapidly growing need for mobility has brought with it a major challenge for improvement in the operation and utilization of automotive systems The economical environmental and safety constraints imposed by the increase in the number of road vehicles and subsequent government policies also require substantial product development through the application of information technology This involves the enhancement of vehicle informatics and telematic systems with additional sensors and systems The advance in the design and development of automotive sensory systems is so rapid that there is urgent need for the experts involved in the technology to work together to provide a reference book for the engineer of today and tomorrow This motivated me to spend two years researching the topics and the basis on which such a book should be written The result is the present compilation of the work of international experts on the state of the art in the field of automotive sensory systems Thus a unique collection has been created for the reference of all those concerned with or interested in the design and development of modern safe and intelligent vehicles Although this book is intended for engineers managers scientists academicians and policy makers students should also find it valuable To meet the requirements of students the basics are explained in simple terms however it is hoped that others will appreciate this approach since most of us are well aware that gaps remain in our knowledge of the elements of our profession
